

## ROOFTOP GREEN, LLC

### Quick Install Sheet

When installing a green roof, be sure that all necessary safety precautions are taken:

- Clear roof surface of any and all debris
  - Secure ladders, cranes, lifts, or booms in appropriate positions
  - Tie down to the roof if needed or specified by site manager
  - Do not stress the roof with heavy equipment or too many trays in one spot
1. Lay boxes flat on the roof surface with the handle on the left side of the box.
  2. Lift the tray out of the box, or break down a box wall and slide the module out near the desired location.
  3. Overlap and rivet each tray to connecting trays on the short ends of the tray.
  4. Be sure that there are no gaps between rows of trays.
  5. On sloped rooftops, rivet the end trays of each row to the end trays of each row above and below.
  6. Water the installed system thoroughly.
  7. Install necessary irrigation or sprinklers, if desired.
  8. Begin watering schedule in the next one to two full days. (See Watering Guidelines for more details.)
